

USING OPENWEBIF TO CHANGE SETTINGS

Connect to the receiver via openwebif. Just type the IP address of your box into the address bar of your web browser.

You may need to get the address from your router. It's possible you have set the display settings wrong and the TV can't support them.

If you can get into it there is a mini remote and display that will allow you to change settings remotely.

The screenshot shows a web browser window with the address bar containing the IP address 192.168.0.242. The browser tabs include 'Search Results - Satellite' and 'Zgemma H7 - OpenWebif'. The OpenWebif interface features a dark blue header with the text 'OpenWebif' and 'LAUNCH OPENWEBIF BY TYPING THE IP ADDRESS INTO THE ADDRESS BAR AND PRESS ENTER'. Below the header, there is a navigation bar with tabs for 'Current', 'Bouquets', 'Providers', 'Satellites', 'All Channels', and 'EPG'. The main content area displays a list of channels under the 'Bouquets' tab, including Sky UK - All channels, Sky UK - Entertainment, Sky UK - Plus 1, Sky UK - Movies, Sky UK - Music, Sky UK - Sports, Sky UK - Pay-Per-View, Sky UK - News, Sky UK - Specialist, Sky UK - Religion, Sky UK - Kids, Sky UK - Shopping, Sky UK - International, Sky UK - Secondary Channels, Sky UK - Adult, Sky UK - Regional, Sky UK - BBC Red Button, Sky UK - Sky Info, and Sky UK - Sky Sports Interactive. A sidebar on the left contains navigation menus for 'Main', 'Remote', 'Extras', and 'Epg Search'. The 'Remote' menu includes a numeric keypad (1-9, 0, MENU, EXIT) and a 'Grab Screenshot' checkbox. The 'Extras' menu includes 'Box Info', 'Settings', 'OSCam WebInterface', 'AutoTimer', and 'BouquetEditor'. The 'Epg Search' menu includes a search input field and a 'Search' button. A mini remote control is visible in the bottom left corner of the interface.
